PATENT

IN THE UNITED STATES PATENT AND TRADEMARK OFFICE

Applicant:	Karl-Heinz Kuebler and Daryl G. Harris
Serial Number:	Unknown
Filing Date:	Concurrent
Examiner/Art Group Unit:	Unknown/Unknown
Title:	FLUID HEATER WITH INTEGRAL HEATER ELEMENTS

INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents  
PO Box 1450  
Alexandria, VA 22313-1450

Sir:

Applicant(s) hereby cite the references listed on the attached form PTO-1449 as relating to the subject matter of the invention described and claimed in the above-identified application.

Reference U.S. Patent Number 4,508,957 discloses an electric heating device for vehicle glass washing fluid. The heating device disclosed in this patent includes a pair of poor heat conducting, plate-like body elements, each having a spiral channel formed therein. The spiral channels are connected in series at one end and the opposite ends are connected to the washing fluid reservoir and two spray nozzles. Each channel is closed by a thin plate made of material having a high heat transmission coefficient. The cover plates are juxtaposed. An electric heating element in the form of a PTC thermistor is sandwiched between the cover plates in contact with the cover plates. In operation, heat generated by the power thermistor is radiated through the thin, highly thermally conductive cover plates into the fluid in the channels of each body element.

The fluid heating device disclosed in U.S. Patent Number 4,508,957 acts as a heat exchanger in that heat generated by the heating element is transmitted

immediately through the highly heat transmissive, thin wall, cover plates to the fluid in the channels.

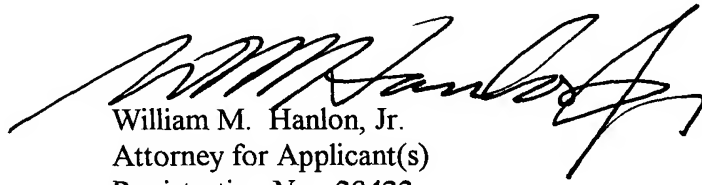

This differs from the invention described and claimed in the subject application in which a thermally conductive mass is heated by one or more heating elements coupled to the mass. The mass acts as a buffer in that the heat from the heating elements absorbed by the mass is then released in a controlled manner to the fluid in the fluid flow channels in the mass to heat the fluid. In this cited reference, all heat transmission to the fluid is through the ends of the channels and not through the poor heat conducting body elements to the fluid, as is the case in the subject application.

These references constitute all the information of which the individuals pursuant to 37 C.F.R. § 1.56(c) are currently aware.

Unless otherwise noted herein, a copy of each cited reference is enclosed.

Respectfully submitted,

YOUNG, BASILE, HANLON, MacFARLANE, WOOD  
& HELMHOLDT, P.C.

A handwritten signature in black ink, appearing to read 'W. M. Hanlon, Jr.', is written over the typed name and title.

William M. Hanlon, Jr.
